

Introducing the M5 BARGUN

State-of-the-art beverage dispensing solution that combines advanced design and cutting-edge technology for an unparalleled performance.

ENHANCED POURING EXPERIENCE

With a sophisticated matte finish, the M5 adds a touch of elegance to any setting and includes a marketing-friendly button design for additional brand recognition. The low-profile handle design ensures a comfortable lightweight grip enhancing user comfort during operation.

OPTIMIZED FLOW RATE

A remarkable 2.5oz per second pour is achieved thanks to optimized fluid passages in the handle providing a bottle-quality beverage.

ADVANCED MANIFOLD TECHNOLOGY

Newton CFV Control Flow Valves provide precise pressure regulation post-manifold, allowing each flow channel for syrup, water, and carbonated water to operate at targeted pressures tailored for specific Brix ratios. Simplified serviceability due to streamlined maintenance with a toggle shut-off feature and tube collector with a lever action mechanism allows quick and easy access.

INNOVATIVE BRIX RATIO CALIBRATION

The M5 eliminates the need for manual ratioing, ensuring a calibrated Brix ratio right out of the box. The orifices are engineered for various beverage specifications, allowing the M5 to dispense even viscous products with ease.

INVENTORY MANAGEMENT EFFICIENCY

By minimizing the number of parts required in the handle and manifold, the M5 Bargun simplifies inventory management and reduces operational complexities.
